

ADGA Referral Commission Demo

Testing, End-to-End Verification & Deployment Guide

A standalone proof-of-concept showing how a referrer link connects a customer to a purchase and automatically generates a configurable commission.

A — Owner / Admin Sees the complete referral journey	B — Referrer Gets a unique referral link and earns commission	C — Customer Registers and purchases a demo service
--	---	---

Demo status: Core referral attribution, registration tracking, purchase tracking, commission calculation, referrer dashboard and admin dashboard were verified end-to-end.

Current demo commission: 10% (configurable for future business rules).

[Open Admin Login](#)

The buttons above work when the demo frontend is running locally. They are not public internet links.

1. Referral Commission Flow

The system follows the A → B → C model discussed for the client demo.

A Owner / Company	→	B Referrer	→	C Customer
Monitors all referral activity		Shares unique referral link		Registers and purchases

Purchase amount	Commission rate	Commission generated
■10,000	10%	■1,000

Formula: $\text{Commission} = \text{Purchase Amount} \times \text{Commission Rate} \div 100$

Example: $\text{■10,000} \times 10\% = \text{■1,000}$.

Important: The referral commission demo is separate from ADGA's existing referral coupon/discount feature.

2. Step-by-Step Demo Testing

Step 1 — Start the demo

Run the backend and frontend locally. The frontend opens at **http://localhost:5173**.

Step 2 — B (Referrer) login

Use the demo referrer account:

Email	referrer@example.com
Password	Referrer@123
Referral code	REF001

Open Referrer Login

After login, the referrer dashboard provides a unique referral URL such as **http://localhost:5173/?ref=REF001**. Copy that link.

Figure 1 — Demo home page

3. Customer Referral Link

Step 3 — C opens the referral link

Open the copied referral URL in an Incognito/private window. The application detects the referral code and shows **Referral link detected: REF001**.

Figure 2 — Referral code detected

Open Referral URL

Step 4 — Customer registration

From the Customer flow, register a new customer while keeping the referral session active. The referral attribution is preserved for the customer's later purchase.

4. Customer Login & Purchase

Step 5 — C logs in

Use the newly created customer account. The customer is taken to the demo service catalog.

Figure 3 — Customer login

Step 6 — Choose a demo service

Available demo services include **Skillwise Demo Service** — ₹10,000 and **ACCA Demo Service** — ₹25,000.

Figure 4 — Customer demo services and purchase result

Step 7 — Purchase

Click **Purchase Demo**. After a successful purchase, the system records the purchase amount and automatically generates the configured commission.

5. Verify Referral & Commission Results

Step 8 — Referrer dashboard

Return to the referrer dashboard and verify clicks, registrations, purchases and total commission.

Figure 5 — Referrer dashboard showing referral activity and commission

Step 9 — Admin dashboard

Login as the owner/admin. The admin dashboard shows the complete referral journey across referrer, customer, service, purchase, commission and status.

6. Demo Credentials & Deployment Process

Demo credentials used for local testing

Role	Email	Password
Admin / Owner	admin@example.com	Admin@123
Referrer	referrer@example.com	Referrer@123
Customer	Create a fresh test account during the demo	Set during registration

Deployment — recommended production setup

The demo is currently verified locally. For a public client demo, deploy the frontend and backend separately and connect both to MongoDB Atlas.

1	Create production MongoDB Atlas database and allow the deployed backend IP/network access.
2	Deploy the Node.js/Express backend to a service such as Render or Railway.
3	Set backend environment variables: MONGO_URI, JWT_SECRET, COMMISSION_RATE, PORT and FRONTEND_URL.
4	Deploy the React/Vite frontend to Vercel or another static hosting service.
5	Set the frontend API/base URL to the deployed backend URL instead of localhost:5000.
6	Update CORS/backend FRONTEND_URL to the deployed frontend domain.
7	Run the end-to-end test again: Referrer link → Customer registration → Purchase → Commission → Referrer dashboard → Admin dashboard.
8	Share the deployed frontend URL and demo credentials with the client.

Deployment note: No public deployment URL has been included in this guide because the current demo was verified on localhost. Replace the localhost links with the final deployed URLs after deployment.

7. Final Verification Checklist

✓	Referrer can log in.
✓	A unique referral link is generated.
✓	Referral code is detected when the link is opened.
✓	Customer registration is attributed to the referrer.
✓	Customer can log in.
✓	Customer can purchase a demo service.
✓	Purchase amount is recorded.
✓	Commission is automatically calculated at the configured rate.
✓	Referrer dashboard shows referral activity and commission.
✓	Admin dashboard shows complete referral activity.
✓	Referrer → Customer → Purchase → Commission relationship is visible.

Client-ready summary

The standalone referral commission proof-of-concept demonstrates the complete $A \rightarrow B \rightarrow C$ referral journey. A (Owner/Admin) gets full visibility, B (Referrer) receives a unique referral link and commission tracking, and C (Customer) registers and purchases a demo service. The current demo commission is 10% and is configurable.
